Production Stack Definition

Runtime (Current)

Universe

- `core10-dynamic40-price-risk-filter-shadow + vol-liq top50` (Phase 113, 117, 269, 148)

Entry

- `entry_score_v2_min=3` (Momentum:low + Board:mid); quality reject off (Phase 314, 267)
- `entry_price_risk_guard` (Phase 153b)
- `pullback_misread_dynamic40_guard` (Dynamic40 only) (Phase 355)
- `near_day_high_low_momentum_dynamic40_guard` (Dynamic40 only) (Phase 364)
- `entry_scan freshness / batch guard` (Phase NP-entry-scan)

Exit

- `board-dynamic trailing-MFE` (high 1.0%/60%, low 0.6%/40%) (Phase 332)
- `hard_stop 1.2%, overlap_replaced, session_close` (Phase structural v1)

Position

- `max_concurrent_positions=3` (100-share observer) (Phase q070_cap3)
- `runtime cap=3; CAP=2 research only` (Phase 388, 389, 387)

Risk

- `daily_loss -2.5%, risk_cluster block, maintenance ratio sim` (Phase YAML)

Discord

- `canonical 100-share yen summary + cap-blocked webhook` (Phase 333, 281)

- Monitoring
 - AM/PM daily runner, preflight 317, post-close 376/377/373 (Phase 148, 317, 376)
- Shadow
 - forward post-session: 255/256, 262, 266, 273, 274 (Phase 255, 262, 266, 273, 274)
- Research
 - capital path 267–274 forward; scaling 374–389 (runtime 未反映) (Phase 272, 273, 388)
- Live Candidate
 - eq1500k_lev2p0_cap3_fixed_stop_1p2 → 2M+ CAP5 dynamic (research) (Phase 272, 274)
- Config: small_paper_pilot_q070_cap3_entry_price_risk_guard_trailing_mfe_shadow.yaml
- Mode: paper_only · shadow_only · order_enabled=false

Current Production Truth

唯一の正 — 本番 runtime (Stack C) 。 矛盾時は本表を優先。

Layer	Current Truth	Source Phase
Universe	core10-dynamic40-price-risk-filter-shadow + vol-liq top50	113, 117, 269, 148
Entry	entry_score_v2_min=3 (Momentum:low + Board:mid); quality reject off	314, 267
Entry	entry_price_risk_guard	153b
Entry	pullback_misread_dynamic40_guard (Dynamic40 only)	355
Entry	near_day_high_low_momentum_dynamic40_guard (Dynamic40 only)	364
Entry	entry_scan freshness / batch guard	NP-entry-scan
Exit	board-dynamic trailing-MFE (high 1.0%/60%, low 0.6%/40%)	332
Exit	hard_stop 1.2%, overlap_replaced, session_close	structural v1
Position	max_concurrent_positions=3 (100-share observer)	q070_cap3
CAP	runtime cap=3; CAP=2 research only	388, 389, 387
Risk	daily_loss -2.5%, risk_cluster block, maintenance ratio sim	YAML
Discord	canonical 100-share yen summary + cap-blocked webhook	333, 281
Monitoring	AM/PM daily runner, preflight 317, post-close 376/377/373	148, 317, 376

Shadow	forward post-session: 255/256, 262, 266, 273, 274	255, 262, 266, 273, 274
Research	capital path 267–274 forward; scaling 374–389 (runtime 未反映)	272, 273, 388
Live Candidate	eq1500k_lev2p0_cap3_fixed_stop_1p2 → 2M+ CAP5 dynamic (research)	272, 274

Documentation Governance

必須: 採用・不採用・置換・削除が発生したら 両方 を更新する。

Step	Artifact	Path
1	Audit CSV	kabu_native/docs/audits/full_phase_history_audit.csv
2	Source of Truth MD	kabu_native/docs/architecture/full_system_development_history.md
3	PDF (optional)	kabu_native/docs/architecture/full_system_development_history.pdf

Event	Required updates
採用	audit overrides → CSV → PRODUCTION_TRUTH → regenerate MD
不採用	audit REJECTED → CSV → regenerate MD (+ Failure/Misconception if material)
置換	audit SUPERSEDED → CSV → regenerate MD
削除	audit removed → CSV → regenerate MD

Workflow:

1. `python scripts/run_full_phase_history_audit.py`
2. Update script constants if runtime changed (PRODUCTION_TRUTH, EVIDENCE_BY_PHASE, ...)
3. `python scripts/run_full_system_development_history.py`
4. `python tools/md_to_pdf.py kabu_native/docs/architecture/full_system_development_history.md`

区分	正本パス	内容
恒久	docs/architecture/	本書 (SoT MD/PDF)
恒久	docs/audits/	full_phase_history_audit.csv
一時	results/reports/	Phase 検証 snapshot のみ

Key Milestones

330 Phase を読む前に把握する重要イベント（CSV + curated reasons）。

Phase	Date	Title	Reason	Current Status
Phase55	2026-05-18	kabu PUSH paper observer を主 runtime に	kabu PUSH paper observer を主 runtime に	active
Phase113	2026-05-27	Daytrade suitability top50 rule	vol-liq top50 universe 採用	active
Phase117	2026-05-27	Volatility liquidity universe	volatility-liquidity universe 基盤	active
Phase148	2026-05-27	AM/PM daily runner orchestration	AM/PM 10:00/14:30 intraday refresh	active
Phase153b	2026-05-27	Entry price risk guard (min price / tick ratio)	entry price risk guard 本番化	active
Phase174	2026-05-30	Fixed trailing MFE 0.8%/50%	fixed trailing MFE shadow（後に332置換）	removed
Phase267	2026-06-14	entry_score_v2 gate (min=3); quality reject off	quality reject off + score_v2 min=3	active
Phase314	2026-06-07	Entry score v2 simplification (Momentum+Board only)	entry score v2 簡素化 (2 token)	active

Introduction

システム目的

kabuステーション® API を一次データ源とし、実発注なし（observer only）で ENTRY/EXIT/ Universe/資金制約を検証する自動売買研究プラットフォーム。旧 Yahoo 非公式 API 系（market/yahoo/）とは別系統で、kabu_native/ に universe・朝スクリーン・リプレイ・small paper observer・shadow 蓄積・日次 runner を集約している。

最終目標は「live 前に capital path まで含めた再現可能な検証」を経て、将来の実運用構成を決めること。現時点では performance guarantee ではなく runtime verification に留まる。

開発開始日

2026-05-06 01:55 JST — first commit（screening / Discord 通知の原型）

現在の到達点（2026-06-14）

層	到達点
Runtime（Stack C）	Phase332 board-dynamic trailing EXIT + Phase314/267 entry_score_v2 + Phase355/364 Dynamic40 ENTRY guard + cap3 + core10-dynamic40 universe
Shadow（forward）	SectorHeat 255, RiskSizing 262, EquityDynamicStop 266, LiveConfig 273, Transition 274 — paper 終了後自動蓄積
Research（capital）	Phase267-274 資産曲線 forward + Phase374-389 CAP/元本スケーリング（runtime 未反映）
運用	AM/PM daily runner（Phase148）、Tomorrow Preflight（317）、引け後 review（376/377）
未完了	PUSH JSONL 完全 normalized replay、CAP=2 runtime 採用、forward shadow 10日ゲート

このシステムが今の形になった理由（一行）：
Yahoo 依存の旧系から kabu PUSH ベース observer へ移行した後、Period A の大敗と 6/12 AM 事故を契機に ENTRY を簡素化し EXIT を板連動 trailing に刷新、Dynamic40 限定 guard で損失構造を切り、なお capital path は research shadow で観測中である。

Chronological Timeline

時系列は Git コミット・report generated_at・paper session 日付を統合。同一日に複数 Phase が並行する場合、依存関係順に記載。

2026-05-06 — 創世期（screening / Discord / entry 原型）

Phase001相当（番号なし — first commit 群）
目的: kabu 連携の足場 — 銘柄スクリーニングと Discord 通知。
背景: 旧 Yahoo 監視ループとは別に、公式 API 系の新 pipeline を tradebotfile に立ち上げる必要があった。
実装内容: screening feature、Discord notice、entry 試行（entry0507 等の連続コミット）。
検証結果: 単体機能は動作。売買ロジック統合前。
採用判定: 基盤として adopted（後続すべての前提）。
影響: kabu_native/src/screening/, src/notify/discord.py 系の原点。
後続: Phase8-11（Logic Lab 前段の quality / replay 試行）。
現在状態: active（朝スクリーン・通知の土台）

2026-05-16~17 — kabustation0516/0517 (API・universe 基盤)

Phase37-43 (validation / gate diagnosis)

目的: 初期 gate と top-quartile 仮説の OOS 検証。

背景: entry quality だけでは足りず、ExposureGate の診断が必要だった。

実装内容: `run_phase43_gate_diagnosis.py`, Logic Lab 連携。

検証結果: gate 診断 CSV/JSON が `results/reports/` に蓄積開始。

採用判定: 診断基盤 adopted ; 当時の gate 閾値自体は後続で多数 superseded。

現在状態: Phase43 pass 要件 (`require_phase43_pass: true`) は YAML に active 残存。

2026-05-18 — Phase55: Small Paper Observer Runtime

Phase55

目的: Yahoo shadow ではなく kabu PUSH ベースの paper observer を主検証ランタイムにする。

背景: live 判断は PUSH/board に依存するが、旧 replay では再現できない (後に Risk S1 として formalize) 。

実装内容: `ObserverPositionTracker`, `pilot_runner.py`, structural exit replay。

検証結果: Git 上唯一 Phase 番号付きコミットメッセージ (Phase55 small paper observer runtime) 。

採用判定: adopted — 現行 Stack C の親世代。

影響: `small_paper/` ディレクトリが主戦場に。

後続: Phase45-148 (observer 拡張)、Phase332 (EXIT 刷新) 。

現在状態: active (骨格は存続、中身は Stack C に置換済み)

2026-05-27 — kabutrade0527 (Exit pathology 時代)

Phase68-88, Phase71 ほか

目的: ENTRY/EXIT 変数監査、momentum fade exit、symbol cooloff、daytrade suitability。

背景: Period A 以前から stop_hit 偏重・fade exit 試行が乱立。

実装内容: `run_phase71_split_momentum_fade_review.py` 等 — 以後 200 番台 research の共通 replay エンジンになる。

検証結果: fade / momentum exit は PF 改善が不安定。

採用判定: fade 系 EXIT は rejected (production から排除、shadow config のみ残存)。

影響: 「EXIT を増やす」路線の失敗が記録開始。

現在状態: Phase71 engine は research 基盤として active ; fade production path は removed

2026-05-29~31 — 構造トレード期間の確立

Phase113/117 (daytrade suitability / vol-liq top50)

目的: Universe を流動性・ボラティリティで絞る。

背景: 全銘柄監視はノイズ過多。

実装内容: daytrade_suitability_rule: volatility_liquidity_top50。

採用判定: adopted — Stack C YAML に active。

Phase148 (AM/PM daily runner)

目的: 朝・昼の universe refresh と paper session 起動を自動化。

背景: Phase114 の 12:25 単発 regen では不十分。

実装内容: run_core10_dynamic40_am_pm_daily_runner.py, intraday refresh 10:00/14:30。

採用判定: adopted。

後続: Phase269 core10-dynamic40-price-risk-filter。

現在状態: active — Phase114 は superseded

2026-06-01~04 — Trailing MFE shadow と Sector Heat 研究

Phase174

目的: 固定 trailing MFE (activate 0.8%, giveback 50%) を structural EXIT shadow で検証。

背景: momentum_fade/quality_decay が不調のため、MFE ベース利確を試行。

実装内容: combined_structural_exit_v1_trailing_mfe_shadow policy。

検証結果: shadow では改善シグナル。board 情報未使用。

採用判定: 一時 adopted (shadow policy 名として production に載る) — 後 Phase332 で置換。

現在状態: superseded — legacy 0.8%/50% は counterfactual shadow のみ active

Phase246-254 (Sector Heat 研究線)

目的: セクター熱・negative filter の forward 検証。

背景: Universe/Entry の regime 依存を定量化したい。

実装内容: market_sector_heat.py, Phase255 forward logger 準備。

採用判定: runtime rejected ; forward shadow observe。

現在状態: Phase255/256 forward shadow active (paper 終了後フック)

2026-06-07 — kabutrade0607 (Entry score 深化)

Phase213-245 (entry score v1/v2 探索)

目的: entry_expectancy_score 系の因子分解・リーク監査。

背景: quality gate だけでは Period A を説明できない。

検証結果: 因子過多・リークリスク・過学習懸念。

採用判定: v1 複雑モデルは superseded by Phase314。

現在状態: research scripts active ; runtime v1 gate は removed

2026-06-08~11 — Entry Score v2 簡素化と Board Dynamic 準備

Phase314

目的: ENTRY を Momentum:low + Board:mid = 3 のみに簡素化。

背景: 「Phase 増加 = rule 堆積」という誤認への反証として、runtime rule を減らす判断。

実装内容: HBRecent/TV/Duration/Price を v2 判定から除外。entry_score_v2_min: 3。

検証結果: Period B で baseline より改善方向。汎化は監視継続。

採用判定: adopted — Stack C の ENTRY 中核。

影響: Phase267 で quality reject を off にし score gate 一本化。

現在状態: active

Phase332 (設計・replay 完了 → 6/13 production 反映)

目的: trailing MFE を entry_imbalance_percentile で board_high/low に分岐。

背景: 固定 0.8%/50% は board 強弱を無視。Phase330/331 full replay で優位。

実装内容: high: 1.0%/60%, low: 0.6%/40%。board_dynamic_trailing_shadow.py で legacy 反事実計測。

検証結果: phase332_board_dynamic_trailing_production_adoption_report.json →
production_adoption_ok: true。

採用判定: adopted (2026-06-09 レポート、2026-06-13 runtime 反映)。

現在状態: active (本番 EXIT)

2026-06-12 — 6/12 Paper Trade (インシデント当日)

当日 Runtime (Stack 移行途中)

背景: 6/12 AM session で Dynamic40 中心に大きな損失。午後・事後分析の起点日。

観測 (Phase355 post-audit) :

- AM accepted 79 (Core10: 11, Dynamic40: 68)
- Dynamic40 reject 28 (pullback guard 相当)
- Core10 reject 0 — guard 設計通り Core10 非触

当日の意味: 「Universe は当たっているが Dynamic40 の押し目誤読 と 高値近接低モメ が損失源」という仮説が data で支持された。

採用判定: 当日中の runtime 変更はなし。分析 Phase348-355 が 6/13 に集中。

現在状態: セッションデータ `results/small_paper/20260612/` は active 参照元

2026-06-13 — kabutrade0612 (6/12 Incident Recovery コミット)

Phase348/349

目的: 6/12 ENTRY 失敗・limit gap 失敗の個別レビュー。

採用判定: research — 直接 guard 採用には至らず。

Phase355

目的: Dynamic40 限定 pullback misread guard 本番化。

背景: 5分騰落<0 かつ VWAP 乖離<0 の ENTRY を reject。

検証結果: Phase355 rollout AM replay pass。Phase365: B stack +100,400円 vs baseline。

採用判定: adopted — `YAML enable_pullback_misread_dynamic40_guard: true`。

現在状態: active

Phase361/362/363/364

目的: near day-high + low momentum guard (C03) の stack 検証。

背景: Phase362 は 全銘柄 C03 が PF 最大だが Core10 への副作用懸念。

検証結果: Phase363: 6/12 単日 delta +140,200円 (C03 all) 。Phase365: Dynamic40 のみ Phase364 を production stack に確定。

採用判定: Phase364 adopted ; Phase362-B (全銘柄) は superseded by Phase365-C。

現在状態: Phase364 active

Phase333 / entry_scan / Discord cap-blocked

目的: 100株円 canonical summary、ENTRY freshness、CAP 満杯 Discord 分離。

採用判定: adopted (運用可視性) 。

現在状態: active

Phase365/373

目的: production stack 歴史検証と本番監視パック。

結論: `maintain_production_stack: true` — Phase355 + Phase364。

現在状態: active (引け後監視の baseline)

Phase376/377

目的: 引け後 daily PnL と Period A/B regime 分解。

検証結果:

- Period A (20260518–27) : Stack C でも -841,550円 (7日)
- Period B (20260528–0612) : Stack C +813,140円 (9日)

影響: 「システムは Period B で成立、Period A は別 regime」という narrative が固定化。

現在状態: active monitoring

2026-06-14 — Capital Path Research (未コミット作業含む)

Phase260–274 (capital / sizing / live config shadow)

目的: Research PF ではなく final_equity 主指標で capital path を forward 蓄積。

背景: Phase267 で「150万 CAP=2 マイナス vs 過去 CAP=2 プラス」の矛盾 (Phase268 で説明)。

Phase267

問題: 150万/2x/CAP=2/100株 → final_equity 1,437,480 (-4.17%)。

原因 (Phase268) : reject 1036 trades の counterfactual PnL が正 — capital constraint で「見えない利益」が除外。

採用判定: research observe — runtime 未反映。

Phase268

結論: Research PF 単独採用禁止。accepted vs rejected 分解。

Phase269–272

目的: 元本 × leverage × CAP × stop grid → Phase270 bucket 推奨 → Phase271 lev1.5 非頑健 → Phase272 lev2.0 固定。

採用判定 (research) : 150万 CAP=3 fixed ; 200万+ CAP=5 dynamic。runtime 未反映。

Phase273/274

目的: paper 終了後 forward shadow — 固定 bucket (273) と 1.5M→2M 自動遷移 (274)。

検証結果 (9日) : transition 未達 (final 1,650,270 < 2M)。

`adopt_not_allowed (day_count<10)`。

現在状態: shadow active, observe

Phase374-389

目的: CAP sensitivity、1.5M live candidate、full regime validation。

Phase388/389: 150万円運用推奨。CAP=2 は research_candidate — runtime は cap3 のまま。

現在状態: research active ; CAP=2 runtime rejected until live confirm

Major Architecture Evolution

Era 1 — 初期スクリーニング (2026-05-06~05-17)

問題: データ源が Yahoo 中心で、kabu 公式 API との乖離。

改善: screening + Discord + universe 構築 CLI。

生存: 朝スクリーン、`build_universe.py`, Discord 通知。旧 Yahoo loop は別系統に隔離。

Era 2 — Paper Observer (2026-05-18~)

問題: shadow/live の判定経路が不一致。

改善: Phase55 small paper observer、`ObserverPositionTracker`, `structural_trades.csv`。

生存: 現 Stack C の runtime 骨格。virtual hold PF は Era 2 末期に廃止方針。

Era 3 — Core10 + Dynamic40 (2026-05-29~)

問題: top50 だけでは alpha/source が不透明。

改善: core10 固定 + dynamic40 rank、price-risk filter (Phase269) 、AM/PM refresh (Phase148) 。

生存: `--universe-mode core10-dynamic40-price-risk-filter-shadow`。rank_21_40 依存はリスクとして記録 (Phase374/381) 。

Era 4 — Entry Score v2 (2026-06-07~)

問題: v1 多因子 score はリーク・過学習・説明可能性に欠ける。

改善: Phase314 で 2 token のみ。Phase267 で quality reject off。

生存: Momentum:low + Board:mid。v1 因子群は shadow log のみ。

Era 5 — Board Dynamic Trailing (2026-06-04～13)

問題: 固定 trailing (Phase174) と fade exit が board regime を反映しない。

改善: Phase332 imbalance percentile 連動 trailing。

失敗からの教訓: EXIT 改善は board/PUSH データが必要 — Yahoo replay のみでは過大評価リスク (Phase381) 。

生存: production EXIT。174 legacy は shadow counterfactual。

Era 6 — 6/12 Incident Recovery (2026-06-12～13)

問題: Dynamic40 で押し目誤読・高値近接低モメ ENTRY が損失。

改善: Phase355 + Phase364 (Dynamic40 のみ) 。Stack C 確定。

不採用: limit-up guard(351), gap-up fade(359), board failure exit(342-347), K10(370), reentry cluster(368)。

生存: 355/364 guards + canonical summary + entry freshness。

Era 7 — Capital Path Research (2026-06-14～)

問題: trade-level PF と capital path PnL の乖離 (Phase268) 。

改善: equity curve simulation、forward shadow 255/262/266/273/274、dual-layer output。

未決: CAP=2 runtime 採用、lev 固定 2.0 の live 開始、10日 forward ゲート。

生存: research + shadow observe — runtime 未反映。

Runtime Evolution

Universe の変遷

時期	状態	理由
初期	手動 CSV / 広 universe	探索期
Phase113/117	vol-liq top50	ノイズ削減
Phase148	intraday refresh 10:00/14:30	Phase114 12:25 superseded
Phase269	core10 + dynamic40 + price-risk	AM/PM runner 既定
Phase375	rank bucket 分析	full D40 置換 rejected

現在: core10-dynamic40-price-risk-filter-shadow。active。

Entry の変遷

時期	状態	結果
quality gate	min_continuation_quality reject	Period A で不調 → reject off
Phase230-245	多因子 score v1	superseded
Phase314/267	score v2 min=3 (Momentum+Board)	active
Phase153b	price risk guard	active
Phase355/364	Dynamic40 guards	active (6/13 採用)
Phase351/359/368/370	各種 guard 試行	rejected

現在: score v2 + 2 guards + price risk + freshness scan。rule 数は Era 4 後に減少。

Exit の変遷

時期	状態	結果
structural v1	stop/session/overlap	基盤 active
fade/momentum/quality_decay	Phase71 系	production removed
Phase174	fixed trailing 0.8%/50%	superseded
Phase332	board-dynamic trailing	active
Phase342-347	board failure exit	rejected
Phase371	high-MFE stop recovery	rejected

現在: hard_stop 1.2% + board-dynamic trailing + overlap + session close。

CAP の変遷

時期	CAP	根拠
初期 trial	3	q070_cap3 由来
Phase245/262	slot occupation 研究	research only
Phase385-389	CAP=2 @ 1.5M research positive	runtime 未反映
Phase267	150万 CAP=2 → マイナス	CAP=3 推奨 (research)

現在 runtime: cap=3。CAP=2 observe (Phase387 shadow monitoring) 。

Discord の変遷

時期	変更
2026-05-06	通知原型
Phase281	trade / cap-blocked チャンネル分離
Phase333	canonical 100-share yen summary
Forward shadow	SectorHeat / RiskSizing / EquityStop / LiveConfig blocks

現在: canonical_summary 必須 + research shadow 追記。active。

--	--	--

Major Failures

1. Period A 大敗 (20260518–27)

何が起きたか: Stack C でも 7日 -841,550円 (Phase377) 。

問題: regime / universe / overlap / exit の合成要因。単一 guard では説明不可。

対応: Period B 分離監視。ENTRY 簡素化 (314) と 6/12 guard は Period B 向けに有効。

現在: active リスク — Period A 再発時の drawdown シナリオ未解決。

--	--	--

2. Phase174 固定 Trailing → Phase332 置換

問題: 全銘柄同一 0.8%/50% は board 強弱を無視。弱板で遅すぎ、強板で早すぎ。

撤回: production trailing ロジックから固定パラメータ削除。

教訓: EXIT は board 特徴量連動 が必要。legacy は shadow counterfactual のみ。

現在: Phase174 superseded / shadow active

--	--	--

3. Fade / Momentum Exit 路線 (Phase71 系)

問題: PF 改善が replay で不安定。live board 依存。

撤回: production structural policy から fade 系排除。

現在: shadow YAML のみ inactive for production

--	--	--

4. Research PF による誤判断リスク (Phase267/268)

問題: unconstrained static PnL は positive に見えるが capital path は negative。

撤回: 「PF>1 なら採用」ルールを明文化禁止。

現在: dual-layer / final_equity 主指標 active 方針

5. Phase362-B 全銘柄 C03 採用案

問題: PF 最大だが Core10 副作用と単日依存。

撤回: Phase365 で Dynamic40 のみ Phase364 に確定。

現在: Phase362-B superseded

6. Leverage 1.5 bucket 推奨 (Phase270 → Phase271/272)

問題: Phase271 — 9日サンプルで lev1.5 優位は非頑健。

撤回: lev 2.0 固定 (Phase272) 。

現在: Phase270/271 superseded / Phase272 active (research recommendation)

7. no_entry_until / virtual hold / TAKE-as-EXIT

項目	結果
Phase13 09:30 gate	removed → session window 管理
300s virtual hold PF	removed (legacy 参照のみ)
TAKE=EXIT (Phase54)	rejected

Major Successes

Phase148 — AM/PM Daily Runner

問題: 手動 session 起動・universe 更新漏れ。

改善: 10:00/14:30 refresh + orchestration。

現在: active — 平日運用の中心。

Phase314 + Phase267 — Entry Score v2 簡素化

問題: 因子過多・quality gate 混乱。

改善: 2 token / min=3 / quality reject off。

現在: active — Stack C ENTRY 中核。

Phase332 — Board Dynamic Trailing EXIT

問題: 固定 trailing の board blindness。

改善: imbalance percentile tier 連動。

現在: active — Stack C EXIT。

Phase355 + Phase364 — Dynamic40 ENTRY Guards

問題: 6/12 Dynamic40 損失構造。

改善: pullback misread + near day-high low-mom (D40 only) 。

検証: Phase365 +813k vs baseline +160k (Period B 全体) 。

現在: active — Core10 非触を維持。

Phase333 — Canonical 100-Share Yen Summary

問題: Discord/summary の PnL 定義揺れ。

改善: observer_exit 実約定ベース一本化。

現在: active

Phase268 + dual-layer — Capital Path 認識

問題: trade PF と equity curve の乖離。

改善: accepted/rejected 分解、final_equity 採用基準。

現在: active 方法論 (Phase273+ に継承)

Phase255/262/266/273/274 — Forward Shadow 基盤

問題: 単発 backtest の過学習。

改善: paper 終了後自動蓄積、10日ゲート。

現在: shadow active, adoption observe

6/12 Incident Deep Dive

発生

日付: 20260612 (AM session 中心)

現象: Dynamic40 中心の accepted ENTRY で損失。Core10 は guard 対象外のため別分析。

分析

Phase	発見
348	ENTRY failure 個別要因
349	limit gap failure
355 post-audit	D40 28 reject 候補、Core10 0 reject
353/354	pullback universe split
358/372/379	low-MFE stop_hit 構造 (guard 後も残存)

検証

Phase	結果
355 rollout	AM replay pass
362	355+C03 stack PF 1.27
363	6/12 C03 delta +140,200円
365	maintain 355+364
377	Period B 黒字化は guard+exit 合成

採用 (production)

- Phase355 pullback guard
- Phase364 near day-high low-mom guard (D40 only — 365 確定)
- Phase332 EXIT (事前採用済み、6/13 コミットで YAML 整合)
- Phase333 canonical summary
- entry_scan freshness
- Discord cap-blocked channel

不採用

- 351 limit-up / 352 historical
- 359 gap-up fade
- 368 symbol reentry cluster
- 370 K10 stop-chain
- 371 high-MFE recovery exit
- 342–347 board failure exit

- 337–341 exit candidate / VWAP tuning
- 362-B C03 all symbols (→ 364 D40 only に縮小)

現在状態

- Stack C active
- 6/12 AM 単独 PnL は guard 後もマイナス (377) — 完全回復ではない
- low-MFE stop_hit 未解決 (research 継続)

Capital Research Era

Phase260 — Position Exposure Audit

目的: CAP/reject/buying power の可視化。
現在: research active — Phase268/269 の前提。

Phase261–262 — Risk-Aware Sizing

目的: fixed_100 vs risk_1pct 等。
262 forward shadow: paper 終了後自動。observe。

Phase263/266 — Equity Dynamic Stop

目的: equity ベース dynamic stop vs fixed 1.2%。
266 forward shadow: active。observe (10日未満)。

Phase267–272 — Equity Curve & Live Config Recommendation

Phase	決定
267	150万 CAP=2 → マイナス (capital path)
268	reject PnL が主因 — PF 単独禁止
269	grid 150 configs
270	bucket 推奨 (lev 混在)
271	lev1.5 非頑健
272	lev2.0 固定 ; 150万 CAP=3 fixed ; 200万+ CAP=5 dynamic

runtime 反映: なし (research recommendation only)

Phase273/274 — Forward Live Config Shadow

構成	内容
273	3 bucket 固定 (1500k / 2000k / 3000k)
274	1500k スタート → equity≥2M で CAP5/dynamic 自動遷移

9日結果: final 1,650,270 — transition 未発生。adopt_not_allowed。

Phase374–389 — Capital Scaling

目的: CAP sensitivity、realistic credit sizing、1.5M live candidate。

Phase388/389: 150万円推奨。CAP=2 research positive。runtime cap3 維持。

Top Open Risks

Priority	Risk ID	Title	Description	Current Mitigation	Owner Phase
1	Risk S1	PUSH replay fidelity	Board/PUSH dependent EXIT/ENTRY not fully reproducible offline	Forward shadow; Risk S1 documented (Phase381)	381
2	Risk S2	Period A recurrence	Stack C Period A still -772k; guards Period B oriented	377/389 regime monitoring	377, 389
3	Risk A1	low-MFE stop_hit	stop_hit after minimal MFE persists post-guards	379 research; no production fix	379
4	Risk A2	CAP=2 runtime未検証	388/389 research positive; runtime cap3 maintained	387 shadow + live session confirm	387, 388
5	Risk A3	Forward shadow <10 日	273/274/266 day_count=9 adopt_not_allowed	Continue forward accumulation	273, 274

What Changed Since 6/12

6/12 Incident Runtime → Current Runtime の差分。

--

Layer	6/12 Runtime	Current Runtime	Phase
Entry	355 off	355 on (D40 pullback)	355

Current State (Latest)

現在の本番 Runtime (Stack C)

```
Config: small_paper_pilot_q070_cap3_entry_price_risk_guard_trailing_mfe_shadow.yaml
Universe: core10-dynamic40-price-risk + vol-liq top50 + AM/PM refresh
Entry:    score_v2 (Momentum+Board≥3) + Phase355 + Phase364 + price risk + freshness
Exit:     Phase332 board-dynamic trailing + stop 1.2% + overlap + session close
Position: max_concurrent_positions=3
Risk:     daily loss -2.5%, risk cluster block, maintenance ratio (sim)
Discord:  canonical 100-share yen + cap-blocked webhook + shadow blocks
Mode:     paper_only, order_enabled=false, shadow_only=true
```

現在の Shadow

Forward (post-session auto) : 255, 262, 266, 273, 274
Inline (session) : 332 legacy trailing counterfactual, 355 pullback shadow, 335 board exit, 214

imbalance, 186 vwap, 230 score shadow 他
Monitoring: Phase387 CAP=2 shadow

現在の Research

- Forward shadow 10日ゲート待ち (273/274/266)
- CAP=2 @ 1.5M live 確認待ち (388/389)
- Period A regime 対策未確立 (377/389)
- low-MFE stop_hit (379)
- Sector heat negative filter 採用判断 (254→255)
- PUSH JSONL normalized replay (Risk S1)

今後の方針

1. Forward shadow を10営業日以上継続 — final_equity 主指標で adopt 判定
2. CAP=2 は live session で再現確認後のみ runtime 検討
3. Period A 再発監視 — guard は Period B 向けに設計されたことを忘れない
4. Replay 基盤整備 — board/PUSH 依存 EXIT の offline 検証信頼性向上
5. edge attribution — Universe / Entry / Exit / Overlap / Capital の分離 PF
6. live 開始構成 (research) : eq1500k_lev2p0_cap3_fixed → 2M+ で CAP5 dynamic (Phase274 shadow で検証中)

Historical Misconceptions

Curated (25 entries). Audit CSV: 330 phases.

Date	Misconception	Believed At The Time	Invalidated By	Final Verdict
2026-05-27	momentum fade EXIT improves PF	fade/hybrid exit trials	Phase71	production rejected
2026-06-04	fixed trailing 0.8%/50% optimal for all symbols	Phase174 shadow gain	Phase332	board-dynamic replace

2026-06-06	PF > 1 implies runtime adoption	unconstrained replay	Phase267/268	final_equity primary
2026-06-06	CAP=2 optimal at 1.5M	slot efficiency	Phase267	CAP=3 research recommend
2026-06-06	rejected trades can be ignored in PF	simplified PF	Phase268	dual-layer required
2026-06-07	entry score v1 multi-factor explains edge	Phase230–245	Phase314/266	v2 two-token only
2026-06-07	quality≥0.70 is core ENTRY gate	YAML default	Phase267	score_v2≥3
2026-06-07	adding rules always improves system	phase count = progress	Phase314	rule reduction
2026-06-08	offline EXIT replay equals live	structural replay	Phase381	PUSH/board gap
2026-06-12	limit-up guard fixes 6/12	Phase351	Phase351 rollout	rejected
2026-06-12	gap-up fade guard fixes AM loss	Phase359	Phase359 review	rejected
2026-06-12	C03 all-symbol guard is production best	Phase362-B	Phase365	D40-only 364
2026-06-13	Stack C profit is ENTRY-guard-only	post-adoption narrative	Phase381	EXIT also contributes
2026-06-13	355+364 fixes Period A	guard universal efficacy	Phase377	Period B oriented
2026-06-13	12:25 PM regen sufficient	Phase114	Phase148	10:00/14:30 refresh

2026-06-13	TAKE event equals EXIT	Phase54	Phase54 review	TAKE ≠ EXIT
2026-06-14	lev1.5 bucket is live optimal	Phase270	Phase271/272	lev2.0 fixed
2026-06-14	9-day forward shadow sufficient for adopt	Phase273 early results	adopt_not_allowed	≥10-day gate
2026-06-14	equity≥2M transition fires immediately	Phase274 design	Phase274 9-day run	transition false
2026-06-14	sector heat filter ready for universe	Phase254/255 delta	Phase255 sample	insufficient_sample
2026-06-14	risk_2pct sizing beats fixed_100	Phase262	low_price_overexpansion	observe
2026-06-14	CAP=2 research → immediate runtime	Phase388/389	live confirm pending	cap3 maintained
2026-06-14	rank_21_40 full replace improves alpha	Phase375	Phase375 review	rejected
2026-06-14	price cap constraint is profit source	unconstrained vs cap confusion	Phase268/267	capital path matters
2026-06-04	fade exit effective in production	Phase71/166	Phase166 rejected	shadow only

Phase Adoption Matrix

Generated from `kabu_native/docs/audits/full_phase_history_audit.csv`.

Category	Total	Adopted	Rejected	Superseded	Active
Universe	21	3	1	2	2
Entry	41	5	4	1	6

Exit	24	1	2	0	1
Position	22	1	0	1	0
Risk	5	0	0	0	1
Sizing	10	0	0	0	1
Capital	2	0	0	1	0

Monitoring	164	6	1	4	2
Data	19	1	0	0	1
Replay	10	0	0	0	0
Documentation	4	0	0	0	1
合計	330	20	8	9	18

Major Decisions Table (Adoption Rationale)

CSV adoption_status ∈ {adopted, rejected, superseded} — 37 rows. Evidence from reports + EVIDENCE_BY_PHASE.

Phase	Decision	Why Adopted	Why Alternatives Rejected	Evidence
Phase13	no_entry_until 09:30 gate	Superseded by Phase 148	related: 148; status: superseded	09:30 no_entry_un session 枠は構造型 (configs/ session_control.ya
Phase55	Small paper observer runtime	Production observer runtime	related: 148,332; status: adopted	Git: Phase55 smal observer runtime
Phase113	Daytrade suitability top50 rule	Production runtime (Stack C)	related: —; status: adopted	Production runtime universe
Phase114	12:25 PM universe regen	Superseded by Phase 148 intraday refresh	related: 148 intraday refresh; status: superseded	Report generated; adoption

Phase117	Volatility liquidity universe	Production runtime (Stack C)	related: —; status: adopted	Production runtime universe
Phase148	AM/PM daily runner orchestration	Production runtime (Stack C)	related: —; status: adopted	Phase114 12:25 st
Phase153b	Entry price risk guard (min price / tick ratio)	Production runtime (Stack C)	related: —; status: adopted	YAML entry_price_active
Phase166	Fade breakdown EXIT	Evaluated and rejected for production	related: —; status: rejected	Evaluated and rejected for production
Phase174	Fixed trailing MFE 0.8%/50%	Superseded by Phase 332	related: 332; status: superseded	Superseded by Phase 332 board-dynamic
Phase187	Phase 187 vwap adverse cluster analysis	Shadow/review only; no hard reject implemented.	related: —; status: rejected	Shadow/review only; no hard reject implemented.
Phase254	Phase 254 price floor adoption review	Robustness observation only. Phase253 negative-filter patterns evaluated for day-level ...	related: —; status: adopted	Robustness observation only. Phase253 negative-filter patterns evaluated for day-level stability,...
Phase255	Sector heat forward shadow logger	Superseded by sector heat forward shadow Phase255	related: 253,254,256; status: superseded	Forward shadow logger only; actual Universe Runtime unchanged. Adoption remains unchanged.
Phase257	Phase 257 core12 dynamic38 pricecap shadow review	Observation only — Core12/Dynamic38 and price-cap variants are not adopted. MIN_CLOSE_P...	related: —; status: adopted	Observation only — Core12/Dynamic38 and price-cap variants are not adopted. MIN_CLOSE_PRICE...
Phase263	Phase 263 max concurrent time concentration	At 5M yen, dynamic_stop_risk_0p5 improves total shadow PnL vs fixed -1.2%.	related: —; status: superseded	At 5M yen, dynamic_stop_risk_0p5 improves total shadow PnL vs fixed -1.2%.
Phase267	entry_score_v2 gate (min=3); quality reject off	Production runtime (Stack C)	related: —; status: adopted	entry_score_v2 gate; quality reject off
Phase268	Phase 268 daily runner default universe review	research_complete	related: —; status: superseded	Report generated; adoption

Phase270	Equity bucket recommendation (mixed leverage)	Superseded by Phase 272	related: 272; status: superseded	Mixed leverage bu
Phase271	Leverage 1.5 bucket recommendation	Superseded by Phase 272	related: 272; status: superseded	lev1.5 non-robust sample
Phase273	Live config forward shadow (Phase272 configs)	Forward shadow logging; no runtime trading change	related: 270,272; status: superseded	day_count=9 adopt_not_allowed final_equity +10.0'
Phase281	Discord channel split (trade vs cap-blocked)	Production runtime (Stack C)	related: —; status: adopted	Report generated; adoption
Phase314	Entry score v2 simplification (Momentum+Board only)	Production runtime (Stack C)	related: —; status: adopted	Rule reduction: 2- score only
Phase332	Board-dynamic trailing-MFE production EXIT	Production runtime (Stack C)	related: —; status: adopted	production_adopti
Phase333	Canonical 100-share yen summary	Production runtime (Stack C)	related: —; status: adopted	kabutrade0612 ca summary
Phase351	Limit-up proximity entry guard	Evaluated and rejected for production	related: —; status: rejected	production rejecte
Phase354	Phase 354 pullback universe split validation	Proceed with production shadow pilot using A_all_symbols.	related: —; status: adopted	Proceed with prod shadow pilot using A_all_symbols.
Phase355	Pullback misread Dynamic40 guard	Production runtime (Stack C)	related: —; status: adopted	+100,400 yen vs b (Phase365); 6/12 reject audit
Phase359	Gap-up fade entry guard	Evaluated and rejected for production	related: —; status: rejected	shadow only rejec
Phase361	Phase 361 near day high low mom guard validation	Production shadow pilot only; adoption bar not fully met.	related: —; status: adopted	Production shadow adoption bar not fi

Phase363	Phase 363 c03 robustness validation	Production candidate: C03 improvement survives 6/12 exclusion.	related: —; status: adopted	Production candid improvement survi exclusion.
Phase364	Near day-high + low momentum Dynamic40 guard	Production runtime (Stack C)	related: 365,363; status: adopted	+140,200 yen 6/12 delta (Phase363); maintain
Phase365	Phase 365 production stack validation	Maintain Phase355 + Phase364 production stack.	related: —; status: adopted	Stack C +483,110 vs baseline +160,5
Phase367	Phase 367 low mfe residual forensic	Shadow-validate A6_symbol_reentry_cluster before any production guard; counterfactual d...	related: —; status: adopted	Shadow-validate A6_symbol_reentry before any produc counterfactual del
Phase368	Symbol reentry cluster guard	Evaluated and rejected for production	related: —; status: rejected	do not adopt
Phase370	K10 stop-chain A1 guard	Evaluated and rejected for production	related: —; status: rejected	evaluated rejectec
Phase371	High-MFE stop_hit exit recovery	Evaluated and rejected for production	related: —; status: rejected	shadow only rejec
Phase375	Dynamic40 rank quality full replace	Evaluated and rejected for production	related: —; status: rejected	full D40 replace re
PhaseNP-canonical-summary	Canonical summary builder	Production reporting	related: 333; status: adopted	100-share yen prir metrics
PhaseNP-entry-scan	Entry scan controller (freshness/batch)	Production ENTRY path guard from kabutrade0612	related: 348,355; status: adopted	entry_scan_contro wired in pilot_runr

Lessons Learned

Lesson	Evidence Phase	Current Interpretation

Rule addition $\neq$ improvement	314, 377	Simplify runtime rules; measure by regime
Research PF $\neq$ Final Equity	267, 268	Capital path + reject decomposition mandatory
Dynamic40 and Core10 are separate problems	355, 364, 365	Guards target D40 only
EXIT without board data is dangerous	332, 381	Board-linked trailing; replay gap Risk S1
Do not push research directly to runtime	273, 274, 388	Forward shadow + ≥ 10 -day gate
Period regime must be read separately	377, 389	Period A losses persist under Stack C
Single-day replay delta is insufficient	363, 365	Maintain with single-day share monitoring
EXIT contributes beyond ENTRY guards	381	trailing-MFE is part of Stack C edge
CAP change is capital-path not trade-PF	267, 385–389	CAP=2 research $\neq$ runtime cap3
Leverage buckets need robustness check	271, 272	Fixed lev2.0 after short-sample failure
Observer-only must stay observer-only	all runtime	order_enabled=false maintained
Discord PnL needs one canonical definition	333	100-share yen from observer_exit
AM session concentrates losses	355 audit, 377	AM/PM decomposition in monitoring
low-MFE stop_hit survives guards	379	Unresolved; research continues
Documentation follows adoption events	390	Update this SoT on adopt/reject/supersede

Appendix A — Complete Phase Timeline

Phase001 (genesis) through Phase99999. 331 rows. CSV-only.

Date	Phase	Category	Description	Verdi
------	-------	----------	-------------	-------

2026-05-06	Phase001	Monitoring	Genesis — screening / Discord / entry prototype	adopted
2026-05-17	Phase8	Monitoring	Phase 8 sweep	observe
2026-05-17	Phase9	Entry	Phase 9 entry quality	observe
2026-05-17	Phase10	Monitoring	Phase 10 combined candidates	observe
2026-05-17	Phase11	Replay	Phase 11 screen replay	observe
2026-05-17	Phase13	Monitoring	no_entry_until 09:30 gate	superse
2026-05-18	Phase37	Monitoring	Phase 37 validation	observe
2026-05-18	Phase38	Monitoring	Phase 38 validation	observe
2026-05-18	Phase39	Monitoring	Phase 39 top quartile	observe
2026-05-18	Phase40	Monitoring	Phase 40 top quartile oos	observe
2026-05-18	Phase41	Data	Phase 41 data oos	observe
2026-05-18	Phase43	Monitoring	Phase 43 gate diagnosis	observe
2026-05-27	Phase68	Entry	Phase 68 variable audit	observe
2026-05-27	Phase69	Monitoring	Phase 69 indicator design audit	observe
2026-05-27	Phase70	Monitoring	Phase 70 decomposed indicator review	observe
2026-05-27	Phase71	Exit	Phase 71 split momentum fade review	observe
2026-05-27	Phase72	Exit	Phase 72 price momentum exit trial review	observe

2026-05-27	Phase74	Entry	Phase 74 entry churn overlap review	observe
2026-05-27	Phase75	Monitoring	Phase 75 quality gate redesign review	observe
2026-05-27	Phase76	Position	Phase 76 overlap position management review	observe
2026-05-27	Phase77	Monitoring	Phase 77 worst symbol regime filter review	observe
2026-05-27	Phase78	Monitoring	Phase 78 rolling symbol cooloff review	observe
2026-05-27	Phase79	Monitoring	Phase 79 symbol cooloff trial review	observe
2026-05-27	Phase81	Universe	Phase 81 universe coverage audit	observe
2026-05-27	Phase82	Monitoring	Phase 82 daytrade suitability review	observe
2026-05-27	Phase83	Monitoring	Phase 83 daytrade suitability oos review	observe
2026-05-27	Phase84	Monitoring	Phase 84 vol liq trial review	observe
2026-05-27	Phase86	Monitoring	Phase 86 vol liq symbol cooloff review	observe
2026-05-27	Phase87	Monitoring	Phase 87 profit source review	observe
2026-05-27	Phase88	Exit	Phase 88 exit pathology review	observe
2026-05-27	Phase89	Monitoring	Phase 89 mfe giveback min peak whatif review	observe

2026-05-27	Phase90	Monitoring	Phase 90 stability review	observe
2026-05-27	Phase95	Universe	Phase 95 universe diagnosis	observe
2026-05-27	Phase96	Universe	Phase 96 dynamic universe design	observe
2026-05-27	Phase99	Universe	Phase 99 shadow universe preflight	observe
2026-05-27	Phase100	Monitoring	Phase 100 jpx master setup check	observe
2026-05-27	Phase101	Universe	Phase 101 dynamic universe scoring review	observe
2026-05-27	Phase103	Monitoring	Phase 103 sampling revision	observe
2026-05-27	Phase104	Monitoring	Phase 104 board error rootcause	observe
2026-05-27	Phase105	Universe	Phase 105 register limit aware universe	observe
2026-05-27	Phase106	Monitoring	Phase 106 shadow live pipeline	observe
2026-05-27	Phase107	Monitoring	Phase 107 dynamic selection design	observe
2026-05-27	Phase108	Monitoring	Phase 108 opening screen design	observe
2026-05-27	Phase109	Universe	Phase 109 opening dynamic50 universe	observe
2026-05-27	Phase110	Monitoring	Phase 110 opening dynamic50 backtest review	observe
2026-05-27	Phase111	Monitoring	Phase 111 opening50 failure analysis	observe
2026-05-27	Phase112	Data	Phase 112 daily data scalability	observe

2026-05-27	Phase113	Universe	Daytrade suitability top50 rule	adopted
2026-05-27	Phase114	Universe	12:25 PM universe regen	superse
2026-05-27	Phase115	Monitoring	Phase 115 am pm shadow pipeline	observe
2026-05-27	Phase116	Monitoring	Phase 116 am pm session policy	observe
2026-05-27	Phase117	Universe	Volatility liquidity universe	adopted
2026-05-27	Phase118	Monitoring	Phase 118 core10 dynamic40 pipeline	observe
2026-05-27	Phase119	Monitoring	Phase 119 daily core rotation design	observe
2026-05-27	Phase120	Exit	Phase 120 mfe mae exit review	observe
2026-05-27	Phase121	Exit	Phase 121 fade exit replay	observe
2026-05-27	Phase122	Monitoring	Phase 122 fade extension conditions	observe
2026-05-27	Phase123	Monitoring	Phase 123 conditional fade extension review	observe
2026-05-27	Phase124	Monitoring	Phase 124 mfe predictor review	observe
2026-05-27	Phase125	Monitoring	Phase 125 reacceleration review	observe
2026-05-27	Phase126	Exit	Phase 126 state based fade exit review	observe
2026-05-27	Phase127	Monitoring	Phase 127 fade watch shadow	observe

2026-05-27	Phase128	Monitoring	Phase 128 fade watch trigger review	observe
2026-05-27	Phase129	Monitoring	Phase 129 trading logic improvement plan	observe
2026-05-27	Phase130	Exit	Phase 130 range hold exit review	observe
2026-05-27	Phase131	Monitoring	Phase 131 reacceleration shadow review	observe
2026-05-27	Phase132	Position	Phase 132 cap sensitivity review	observe
2026-05-27	Phase133	Monitoring	Phase 133 switch old vs new review	observe
2026-05-27	Phase134	Monitoring	Phase 134 fade switch policy review	observe
2026-05-27	Phase135	Monitoring	Phase 135 fade switch cooldown shadow review	observe
2026-05-27	Phase136	Entry	Phase 136 cap3 entry replay review	observe
2026-05-27	Phase137	Replay	Phase 137 replay fidelity review	observe
2026-05-27	Phase138	Replay	Phase 138 hybrid replay engine review	observe
2026-05-27	Phase139	Monitoring	Phase 139 hybrid fade switch policy review	observe
2026-05-27	Phase140	Monitoring	Phase 140 fade switch priority analysis	observe
2026-05-27	Phase141	Monitoring	Phase 141 fade switch block shadow review	observe
